FOUR-PLACE LOGARITHMS

BY

GEORGE WILLIAM JONES

Professor of Mathematics in Cornell University

I. Four-place Logarithms of Three-figure Numbers.

II. The Natural Sines, Cosines, Tangents, and Cotangents of Angles differing by Ten Minutes, and their Four-place Logarithms.

A good collection of Mathematical Tables is like a Dictionary: it may lie on the shelf for months, but when it is wanted it is wanted, and its use for a single hour may be worth the price of the book.

JONES' FIVE-PLACE LOGARITHMS.

PAGES

I. LOGARITHMS OF NUMBERS, - - - - - 2–19
A table of five-place logarithms of four-figure numbers, with differences for a fifth figure.

II. TRIGONOMETRIC FUNCTIONS, - - - - - 20–64
A table of natural sines, cosines, tangents and cotangents of angles 0°-180°, to minutes, and of their five-place logarithms, with differences for seconds.

III. MINOR TABLES, - - - - - - - - 3–19
Natural Logarithms; Ten-Place Logarithms; Weights and Measures; Mathematical Constants; Meridional Parts; Square-Roots; Cube-Roots; Reciprocals; Sines and Tangents of Small Angles.

ASTRONOMY LIBRARY

JONES' LOGARITHMIC TABLES.

FOUR-PLACE, SIX-PLACE, AND TEN-PLACE.

EXPLANATION OF THE TABLES, - - - - - 3–11

I. FOUR-PLACE LOGARITHMS, - - - - 12–14
A four-place table of logarithms of the natural numbers 1, 2, 3,..999, with a table of proportional differences in the margin, and of the logarithms of the squares, cubes, square-roots, cube-roots and reciprocals of the numbers 1, 2, 3,..99.

II. FOUR-PLACE TRIGONOMETRIC FUNCTIONS, - 15–19
A four-place table of logarithms of the six principal trigonometric functions, with differences for minutes, and of the length of arcs in radians.

III. LOGARITHMS OF NUMBERS, - - - - 20–37
A six-place table of logarithms of four-figure numbers, with a table of differences.

IV. CONSTANTS OF MATHEMATICS AND OF NATURE —WEIGHTS AND MEASURES, - - 38–41
A table of useful constants, with the logarithms of those in common use.

V. ADDITION-SUBTRACTION LOGARITHMS, - 42–58
A six-place table of logarithms so related that, by their use, the logarithm of the sum and of the difference of two numbers may be found from their logarithms without taking out the numbers themselves.

VI. SINES AND TANGENTS OF SMALL ANGLES, - 59
A table of the ratios $\sin A'' : A$, $\tan A'' : A$ for angles 0°–5°, whereby the logarithmic sines and tangents of these small angles are found more exactly than by Table VII.

(SEE THE THIRD COVER PAGE.)

Lieutenant Wilbur Crawford

FOUR-PLACE LOGARITHMS.

FORM OF A LOGARITHM.

THE LOGARITHM of a number is the exponent of that power to which another number, the *base*, must be raised to give the number first named. The base commonly used is 10; and as most numbers are incommensurable powers of 10, a common logarithm, in general, consists of an integer, the *characteristic*, and an endless decimal, the *mantissa*.

If a number be resolved into two factors, of which one is an integer power of 10 and the other lies between 1 and 10, then the exponent of 10 is the characteristic, and the logarithm of the other factor is the mantissa. The characteristic is positive if the number be larger than 1, and negative if it be smaller; the mantissa is always positive. A negative characteristic is indicated by the sign − above it. The logarithms of numbers that differ only by the position of the decimal point have different characteristics but the same mantissa.

E.g. $7770 = 10^3 \times 7.77$ and $\log 7770 = 3.8904$; $.0777 = 10^{-2} \times 7.77$, and $\log .0777 = \bar{2}.8904$.

TABLES OF LOGARITHMS.

The logarithms of any set of consecutive numbers, arranged in a form convenient for use, constitute a *table of logarithms*. Such a table to the base 10 need give only the mantissas; the characteristics are manifest. This table is arranged upon the common double-entry plan *i.e.* the mantissa of the logarithm of a three-figure number stands opposite the first two figures and under the third figure. The logarithms are given correct to four places.

TO TAKE OUT THE LOGARITHM OF A NUMBER.

A three-figure number: Take out the tabular mantissa that lies in line with the first two figures of the number and under the third figure; the characteristic is the exponent of that integer power of 10 which lies next below the number.

E.g. $\log 677 = 2.8306$, $\log 6.78 = 0.8312$, $\log .0679 = \bar{2}.8319$, $\log 676\,000 = 5.8299$.

A number of less than three figures: Make the number a three-figure number by annexing zeros, and follow the rule given above.

E.g. $\log 700 = 2.8451$, $\log 7 = 0.8451$, $\log .0071 = \bar{3}.8513$, $\log 71\,000 = 4.8513$.

A four-figure number: Take out the tabular mantissa of the first three figures, and add such part of the difference between this mantissa and the next greater tabular mantissa (the *tabular difference*), as the fourth figure is a part of 10; and so for a five-figure number.

E.g. $\because \log 678 = 2.8312$ and $\log 679 = 2.8319$,

$\therefore \log 678.6 = 2.8312 + .0007 \times 6/10 = 2.8316$, $\log 6.7875 = 0.8312 + .0007 \times 75/100 = 0.8317$.

TO TAKE OUT A NUMBER FROM ITS LOGARITHM.

The mantissa found in the table: Join the figure at the top that lies above the given mantissa to the two figures upon the same line at the extreme left; in this three-figure number so place the decimal point that the number shall be next above that power of 10 whose exponent is the characteristic of the logarithm.

E.g. $\log^{-1} 2.8312 = 678$, $\log^{-1} 0.8451 = 7$, $\log^{-1} \bar{3}.8513 = .0071$, $\log^{-1} 5.8513 = 710\,000$.

The mantissa not found in the table: Take out the three-figure number of the tabular mantissa next less than the given mantissa, and to these three figures join the quotient of the difference of these two mantissas by the tabular difference.

E.g. $\because \log 678 = 2.8312$ and $\log 679 = 2.8319$,

$\therefore \log^{-1} 2.8316 = 678\frac{4}{7} = 678.6$, $\log^{-1} \bar{2}.8317 = .0678\frac{5}{7} = .06787$.

The use of trigonometric ratios and their logarithms is explained in works on trigonometry.

PAGES

VII. TRIGONOMETRIC FUNCTIONS, - - - - 60–104
A five-place table of natural sines, cosines, tangents, and cotangents of angles 0°–180°, to minutes, and a six-place table of their logarithms, with differences of logarithms for seconds expressed in units of the sixth decimal place.

VIII. NATURAL LOGARITHMS, - - - - - 105–117
A six-place table of natural logarithms of the decimal numbers, .01, .02, .03,..9.99, of the natural numbers 1, 2, 3,..1218, and of the prime numbers between 1218 and 10000.

IX. PRIME AND COMPOSITE NUMBERS, - - 118–137
A table of prime and composite numbers from 1 to 20000, with the factors of the composite numbers that are not divisible by 2 or 5, and ten-place logarithms of the primes.

X. SQUARES, - - - - - - - - - 138–139
A table of the squares of the natural numbers 1, 2, 3,..999.

XI. CUBES, - - - - - - - - - 140–141
A table of the cubes of the decimal numbers .1, .2, .3,..99.9.

XII. SQUARE-ROOTS, - - - - - - - - 142–145
A table of the square-roots, to four decimal places, of the natural numbers 1, 2, 3,..999, and of the decimal numbers .1, .2, .3,..99.9.

XIII. CUBE-ROOTS, - - - - - - - - 146–151
A table of the cube-roots, to four decimal places, of the natural numbers 1, 2, 3,..999 of the decimals .1, .2, .3,..99.9, and of the decimals .01, .02, .03,..9.99.

XIV. RECIPROCALS, - - - - - - - - 152–153
A table of the reciprocals of the decimal numbers .01, .02, .03,..9.99.

XV. QUARTER-SQUARES, - - - - - - 154–157
A table of the quarter-squares of the natural numbers 1, 2, 3,..2000.

XVI. BESSEL'S COEFFICIENTS, - - - - - 158
A table of Bessel's coefficients for second, third, fourth, and fifth differences, for interpolation.

XVII. BINOMIAL COEFFICIENTS, - - - - - 159
A table of binomial coefficients for second, third, fourth, and fifth differences, for interpolation.

XVIII. ERRORS OF OBSERVATION, - - - - - 160
A table of ordinates of the probability-curve, values of probability integrals, and other values.

Mathematical Text-Books.

PRICE-LIST, OCTOBER 1, 1896.

I. A DRILL-BOOK IN TRIGONOMETRY.

SECOND EDITION.

For the elementary and the advanced work of high-school and college classes.

12mo, cloth, xvi + 192 pp. Single copies by mail, $1.00.
All cash orders (carriage at the buyer's cost), 75 cents.

II. A DRILL-BOOK IN ALGEBRA.

THIRD EDITION.

For the more advanced classes in the high schools and academies and the lower classes in the colleges.

12mo, cloth, xvi + 272 pp. Single copies by mail, $1.00.
All cash orders (carriage at the buyer's cost), 75 cents.

AN ANSWER-BOOK, for teachers only, 25 cents.
A BOX OF QUESTION-CARDS, for the class-room, 75 cents.

III. LOGARITHMIC TABLES.

SIXTH EDITION.

Eighteen tables, (four-place, six-place and ten-place,) with explanations, for use in the class-room, the laboratory, and the office. Large open pages, fine heavy paper.

Royal 8vo, cloth, 160 pp. Single copies by mail, $1.00.
All cash orders (carriage at the buyer's cost), 75 cents.

IV. FOUR-PLACE LOGARITHMS.

Two tables: one of the logarithms of three-figure numbers, the other of trigonometric ratios and their logarithms for angles differing by ten minutes.

12mo, paper, 8 pp. Single copies by mail, 5 cents.
All cash orders (carriage at the buyer's cost), 4 cents.

V. FIVE-PLACE LOGARITHMS.

FIRST EDITION.

Eleven tables: one of the logarithms of four-figure numbers, one of trigonometric ratios and their logarithms for angles differing by minutes, and nine minor tables, for the use of high-school and college classes. Large open pages, fine heavy paper.

Royal 8vo, cloth, 64 pp. Single copies by mail, 60 cents.
All cash orders (carriage at the buyer's cost), 45 cents.

VI. PROBLEMS IN ALGEBRA, FOR BEGINNERS.

IN PREPARATION.

VII. HIGHER ALGEBRA.

IN PREPARATION.

Single copies of these books (except the last) will be sent free to teachers of mathematics, for their inspection.
